SUMMARY

Front-End Software Developer at Convert Digital with a background in architecture and construction, bringing strong problem-solving, stakeholder management, and system-thinking skills. With hands-on experience delivering scalable, accessible, and reusable web solutions. Known for empathetic communication, proactivity, and a collaborative mindset. Seeking to contribute to a fast-paced, learning-focused team that values impact, growth, and a sense of humour.

EXPERIENCE

L3 Software Engineer (Frontend)

Convert Digital

March 2023 - Current, Victoria, AU

- Successfully led 4 major projects involving data schema design, code quality assurance, and cross-functional collaboration with designers, project managers, and business analysts.
- Spearheaded integrations and developed intricate, reusable components referenced in multiple projects including Searchspring: API based search feature for Search/Collection pages, Included beacon tracking for analytics, Omneo: Implemented a comprehensive loyalty feature with Omneo's API and Product Swatches: Complex product swatches (PLP Cards and PDP).
- Developed reusable functions for a Cypress testing suite, streamlining automated testing processes.
- Aligned development practices with WCAG 2.2 guidelines, ensuring accessibility compliance through updated and accessible components.
- Owned end-to-end development of Shopify Checkout Extensions, including: Building complex BAU discounts with functions or complex shipping components with UI Extensions, establishing deployment processes and developer documentation and serving as the primary escalation point for checkout-related queries within a 30-developer team.

Building Designer

Anchor Homes

December 2021 - December 2022

- Experienced in producing high-quality architectural and construction drawings, managing projects from concept through to completion.
- Proficient in overseeing 5–10 projects simultaneously across varying budgets and timelines, ensuring timely and efficient delivery.
- Adept at coordinating with external stakeholders—including tradespeople, clients, and regulatory councils—to maintain alignment and ensure project success.
- Designed and implemented an automation tool for window documentation, reducing revision time by 5%.
- Created a surface area calculation tool, cutting documentation time by 9% for future revisions.
- Streamlined permit approval workflows by introducing improved documentation practices, boosting efficiency and compliance.

Architectural Draftsperson

Henley Properties

March 2019 - December 2021

- Exceeded KPI targets with 110% performance in producing detailed working drawings and managing stakeholder relationships within an 18-member team.
- Coordinated daily communication with over 20 internal and external stakeholders, including estimators, engineers, and regulatory authorities, ensuring project alignment.
- Enhanced operational efficiency and reduced escalations through contributions to creation of internal knowledge sharing documentation.

PROJECT

CTO / Co-Founder

Koala Sim • www.koalasim.com.au • December 2024 - Current

- Automated manual data-entry workflows, eliminating ~2 hours/week of labor by implementing scheduled Cloudflare Workers to fetch, transform, and upload product data via GraphQL.
- Reduced product delivery time by 97%, from ~30 minutes to under 1 minute, by deploying Cloudflare Workers to automate eSIM order creation via API calls and webhooks.
- Cut SEO and content creation time by 90%, eliminating approximately ~2 hours/week, using the DeepSeek API to auto-generate content and publishing it through GraphQL.
